INTRODUCTION

Agricultural economics" is a concept which gives the information regarding how we can make agriculture as a profitable economic concept in the nation? How we can make our farmers are richer than industrialists by depending on agriculture as an occupation?. The concept " Agricultural economics" is a concept which helps the farmer to handle agriculture as profitable occupation and also helps him to contribute to the economic progress of the nation.

By using less resources, and using mechanization in agriculture, and such as using scientific seeds and there should be preference to " pre harvest revolution and post harvest revolution" are also comes under the concept of " Agricultural economics".

The mechanization of agriculture, using scientific as well as eco friendly method of agriculture, , encouragement of import and export of updating technology etc are comes under the conversion of agriculture as a profitable economy.

Methodology;- In this methodology, we can understand that Agricultural economics is a new concept which affects the several parts of the economics like, agro based industries, banking, insurance, transport economic system, communication, import and export etc. By studying agriculture as an independent subject, we can compare the advantages of agriculture as a supportive to the economic system of any country.

In the related matters of methodology, relating to both subjects like agriculture and economics, both are co-related even in the ancient period, where even industries are not introduced, . That time, agriculture is the only one occupation which helped for livelihood of the people at that time.

The studying the other co-related activities of agriculture like bee keeping, horticulture, sericulture, flowericulture,

Objectives:- The objectives of the concept “ Agriculture and economics” are can be listed as follows:-

- a) Studying agriculture and economics as the so-related subjects.
- b) Studying agriculture as an industrial applied subject and analyzing the industrial transformation of agriculture.
- c) Studying agriculture with the co-relate activities like bee keeping, horticulture, sericulture, flower culture, basket making, domestication of animals etc and analyzing how they supports the economic condition of the farmers.
- d) Studying about how agriculture economic entirely supports the economic condition of the nation.
- e) How the agriculture economics concept is positively affects the earning the foreign exchange of a nation.
- f) Studying about how the agriculture supports the national and per capital income of any nation.

Results and discussion:-

By doing efficient hard work in agriculture, a farmer can produce food grain for his purpose as well as he can support the food production and distribution system of the

nation. So many countries has achieved the self sufficiency in food production including India. It also helps to increase in foreign exchange.

By doing agriculture, farmer can also support to industrial sector as well as manufacturing sector.

The green revolution in the production of food grains leads to self sufficiency which also leads to export to other nations and leads in earning foreign exchange.

Importance of studying agriculture as supportive to economics:- It can has many points.

a).By studying agriculture and co-related with economics, we can find out the solutions to the problems faced by farmers as well as the entrepreneurs who are working agriculture related activities.

b) By studying agricultural economics we can make the farmers as the rich entrepreneurs who are doing manufavtiring avtivities in agriculture.

;- In the studying about the agriculture economics, there are so much outcomes are coming. The results are having so many variations, but the we can discuss many points.

By studying and analyzing the concept, we can know that We ads getting many ways to make agriculture as a profitable occupation and it supports the economy of an individual as well as the economy of the nation.

Conclusion:- Totally we can say that ;; the concept of agricultural economy;'' is an interesting and user to the economic structure of any nation and as well as it can be used to food transformation f agriculture as a rich occupation and it can also attract the young generation also..

It can leads to the research in many fields also.

Totally it is an interesting concept.

Let us try in this direction
